

Digital Lead Generation for Manufacturers in 2021

An Analysis of Website Effectiveness

Are You Positioned for Strong Lead Generation in 2021?

2020 was a whirlwind of a year - to say the least. As traditional in-person tradeshows and demonstrations were canceled across the globe due to the COVID-19 pandemic, many manufacturers are left wondering how to meet customers where they are: Online. **Now more than ever your website is your most valuable sales and marketing asset.** Despite how often we're told to never judge a book by its cover, that's exactly what your prospects are doing when they visit your site - and the manufacturing industry is no exception. It's simple: when your website isn't working hard for you, you're missing out on the opportunity to generate qualified leads and, thus, close the coveted sale.

But effective websites aren't just slapdash code and stock images, nor is it good enough for your site to simply serve as a bulletin board for your product. Your website should help your brand stand out, it should be optimized to show up in searches and have a simple and engaging user experience, it should offer up valuable content to prospects—and that's just the beginning.

The latest B2B Content Marketing Report suggests that manufacturing businesses are finally jumping on the inbound marketing bandwagon. But that doesn't mean the shift has been immediate. Recent large-scale studies show that countless manufacturers are still falling behind because they aren't leveraging their websites properly.

With conflicting information coming in from all sides, we decided to investigate ourselves. To discover the impact of the industry's

slow adjustment to the digital wave, **we inspected 100 different manufacturing firm websites**, and while some fared better than others, **it quickly became clear that many industrial sector sites needed a lot of work**. And we can help.

In this study, you'll not only find relevant and surprising data, but also a list of best practices on how to make your business's website stand out against the noise. **With over 85% of searches for products or services being conducted online, it's imperative that your site shows up** when your prospective buyers are doing their research, and that it creates a positive impression of your company once they find you.

We hope you find the following information valuable to your own marketing and sales strategies. Continue on to learn more about manufacturing website best practices, discover the strengths and weaknesses of the 100 websites we analyzed and **see how your company stacks up**. Happy reading!

Sincerely,

Susan LaPlante-Dube & Maureen Condon
PMG Principals

Methodology & Demographics

We approached this study by first identifying 14 marketing best practices that all manufacturing firms should follow to maximize their website traffic and lead building potential. From there, we conducted our study of 100 manufacturing firm websites, reviewing each site individually to determine how well they met our predefined criteria. What you'll find here is a summary of the results as well as explanations of the significance of each best practice.

Marketing Best Practice Categories Assessed

Lead Generation

- ✔ Digital resources (white papers, technical docs, eBooks, webinars, etc.)
- ✔ 2+ pieces of content gated behind lead generation forms
- ✔ Form on Contact page (not just email / phone contact information)
- ✔ Clear sales conversion points (in addition to the Contact page)

Social Media

- ✔ Blog with social sharing options
- ✔ Follow links for social media channels; active social media posting
- ✔ LinkedIn Company Page

Website Content

- ✔ Visual Call-to-Action buttons
- ✔ Video content
- ✔ Case studies and/or customer testimonials
- ✔ Email subscription

Optimization

- ✔ Mobile-friendly / responsive
- ✔ Analytics enabled
- ✔ Fully optimized for search

Selected Businesses

The 100 manufacturers

were randomly selected and incorporated companies from a number of different sub-industries including...

- **Injection molding**
 - **Metal fabrication**
 - **Plastic molding**
 - **Packaging... and many more.**
-

Executive Summary & Key Findings

There are tons of ways you can qualitatively slice and dice a website in order to evaluate its efficacy and performance. But if you strip away all the bells and whistles, the most effective manufacturing websites:

- Encourage visit-to-lead conversions
- Integrate with social media marketing efforts
- Have great educational content
- Are fully optimized for search

Using these elements as guidelines for our best practices, we then categorized our assessments into four main groups:

- **Lead Generation**
- **Social Media**
- **Website Content**
- **Optimization**

Here's a general breakdown of our key findings in each area.

Lead Generation

To gain potential customers, your website must incorporate streamlined ways to collect their contact information. Yes, a Contact Us page will help with this, but this typically only caters to prospects that are near the point of purchase. What about all those other prospects who aren't at all ready to buy?

We found that only half of MFG companies are offering educational resources as downloads on their site, and that only 15% of manufacturing websites gate resources behind a lead generation form. So many firms are missing out on easy opportunities to generate new leads, and as buyers continue to conduct their research and formulate most of their decisions online before even picking up the phone, these firms will likely be finding themselves falling behind others in their industry.

Only 15% of manufacturing websites gate resources behind a lead generation form.

Social Media

As a manufacturer, you may be asking yourself, "Is it really that important to follow social media best practices? My audience isn't on social media." Well, to be frank, they actually are. Even if they aren't using social for business or they're only using one platform, industrial manufacturing buyers and decision makers are familiar with social media – and they're using it to engage with the people they know. And there are many ways you can target and connect with them. While most manufacturers in our study do have a LinkedIn Company page, only 44% are posting on social media and very few include social follow options directly

on their websites. It may take time, but frequent posting to your social media channels allows you to build brand awareness, promote your content, connect with customers and prospects, and enables users to keep up with your business.

Only 44% are posting on social media and very few include social follow options directly on their websites.

Website Content

Prospects are coming to your website more informed than ever. They have a vast bank of knowledge to pull from when it comes to making purchases, and you want to be sure to offer them anything they might need when they are assessing their options. Video content is one of the easiest ways to explain your product or service, share customer stories and provide a window into your company's culture—and research shows video is becoming an absolute MUST. More than half of manufacturing sites lack video content, and 78% are missing customer testimonials and case studies. Yet these are the elements that will tip the scales in your favor when a sales-ready prospect is narrowing down the decision between your business and your competitor.

78% are missing customer testimonials and case studies.

Optimization

After conducting our analysis, we found that 86% of manufacturing websites inspected were not fully optimized for search. In fact, many are missing several **key on-page optimization elements**, making it much more difficult not only for search engines to crawl their websites but for users to find them as well. While over half of our randomly selected pool do have mobile-friendly, responsive websites—and roughly two thirds have analytics enabled—there are still a large number of sites that are poorly optimized relative to other industry benchmarks.

86% of manufacturing websites are not fully optimized for search.

Lead Generation Best Practices

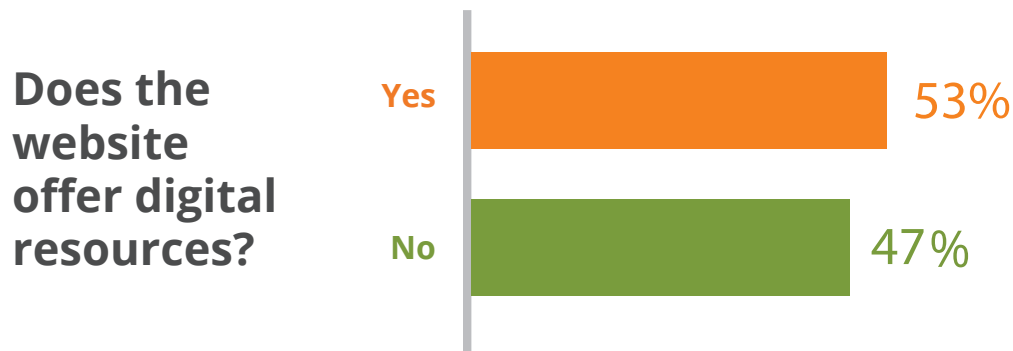

- Utilize Digital Resources
- Gate Content Behind Forms
- Add a Form to Your Contact Us Page
- Create Multiple Clear Sales Conversion Points

Lead Generation Best Practices

Utilize Digital Resources

(White papers, Technical Doc, eBooks, Webinars, Etc.)

Providing content for website visitors is critical if your site is going to help your business generate qualified leads. Your B2B manufacturing firm's target buyers want to purchase solutions from the experts—and who doesn't? Among many other content creation benefits, consistently producing and publishing digital resources helps manufacturing companies showcase their thought leadership and industry knowledge—and establish a stronger presence in the market. Moreover, **business buyers are looking for solutions to problems they're encountering on a regular basis, and engineers and other industrial sector decision makers are increasingly turning to online sources to find answers.** Shouldn't *you* be that go-to answer?

Interestingly, our research showed that **47% of the MFG company websites examined did not offer any educational content.** The good news is that a (slim) majority of companies are boarding the content marketing train. The bad news is that those without educational content are falling behind their competitors.

Without cluttering your site, you can offer valuable downloadable resources, all of which will provide visitors with information about a complex issue that your company is working to solve, or further inform them about a particular hot-button industry topic they might be interested in. Those resources could take the form of any number of things:

- White Papers
- Technical Documents
- eBooks
- Infographics
- Sales Sheets
- Webinars, etc.
- Calculators
- How-to Guides
- Research Reports

The best manufacturing marketers will also leverage content that addresses the needs of prospects at all points in the buyer's journey. Once you've established yourself as a thought leader in your field, the right people will keep coming back to your site for more help until they're ready to buy!

Gate Content Behind Forms

While it's important to offer easy-to-access educational website content to your audience (a blog, for instance), **it's just as important to gate some of that content behind lead generation forms.** If an anonymous website visitor finds the description of your gated resource compelling enough, they will fill out and submit the form to view it, thereby converting into a lead. This not only provides your team with contact information to follow up with the lead, but it also helps you gauge their interest in your business, potentially identify their buying stage, and nurtures them down the funnel with other pieces of relevant content later.

Does the
website
have gated
content?

Yes: 15%
No: 85%

According to our study, a **whopping 85% of manufacturers have left all of their content ungated!** If most or all of your content isn't behind a form, you're missing the opportunity to obtain an email address that allows you to continue marketing to that new contact. By simply including a lead generation form (on an appealing landing page) "in front" of some pre-existing content you have on your site, you can easily gather basic information (name, email, company, etc.) about who is interested in what you have to offer. All of your content is still free and accessible, but now you can also generate new leads with it!

Only 15% of MFG company sites are leveraging lead gen forms;
a vast majority have a great
opportunity to drive conversions
with their content.

Add a Form to Your Contact Us Page

(Not just email / phone contact information)

The Contact Us page is one of the most visited pages on any website, particularly for prospects in the middle or at the bottom of your sales funnel. We found that many manufacturers **(62%)** are aware of this, and have provided visitors with a form on their Contact Us page (which not only promotes lead conversion but also encourages the beginning of a conversation). **But that still leaves one third of the randomly selected companies without a form on the Contact Us page.**

Does the website have a form on the Contact Us page?

Yes

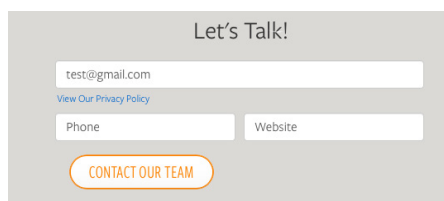

62%

No

38%

People click over to a Contact Us page for a variety of reasons—to find your location, ask questions, inquire about a product or request a quote—but keep in mind that they may also be visiting this page outside of your business hours. Sure, they may pick up the phone and call, but a Contact form gives prospects a chance to connect with you on their time AND affords you the opportunity to collect information about them before you respond. You can then customize your approach to the follow-up call.

Know that Contact Us page forms can be very basic...

On the other hand, a Contact Us page form can be more comprehensive! Whatever information your sales rep (or appropriate person) must have to qualify the prospect, that's what you should include on your form. For example, you might:

- Ask for a **Job Role** or **Company Name**
- Add a **drop-down menu** of available services or products that might interest them
- Provide a space for **project specifications**

Particularly, if you are looking to gather information about your potential customers, or you're feeling frustrated with the messages coming through due to lack of information, a comprehensive contact form will suit your business best.

Create Multiple Clear Sales Conversion Points

(In addition to the Contact page)

Clear sales conversion points are closely related to Call-to-Action buttons. Sales conversion points are hotspots throughout your website where you're essentially trying to motivate the website visitor to provide some form of contact information (or other personal info) in exchange for a bottom-of-the-funnel offering. These visitors may not be anonymous; in fact, they might already be leads (perhaps they've already converted on a resource landing page), and the next CTA might be a push in the purchasing direction. **Whether it's Get a Quote, Ask an Expert or Schedule a Consultation, your goal is for these prospects to convert into sales qualified leads!**

Does the website have multiple sales conversion points?

Yes

52%

No

48%

It's crucial to provide a digital location for prospects to indicate they are sales ready – and, if you're business sells products, it's just as critical for buyers to be able to complete a purchase via the website. In the study, **we discovered that 52% of manufacturers have included several conversion points throughout their websites, beyond the Contact page.**

With more clickable CTAs, sales-related forms and pages on which prospects can signal an interest in your business, **your sales team can use real-time website visit and conversion data to inform their decisions about how, when and what to communicate to a potential customer.** As long as your analytics are enabled and you have access to website performance metrics, having a greater number of sales conversion points will greatly assist your selling process.

Social Media Best Practices

- Have a Blog Complete With Social Sharing Options
- Be Socially Savvy with Follow Links and Active Posting
- Have an Active LinkedIn Company Page

Social Media Best Practices

Have a Blog Complete With Social Sharing Options

Creating and maintaining a company blog is a great way to provide new content to your followers, prospects and customers. Its uses range from announcing company news and introducing staff members to discussing important industry topics and publishing educational content that helps your audience solve problems. That last one is particularly important!

By providing your website visitors with NON-promotional content that addresses their pain points, or posts that simply shed light on a deeply relevant industry issue, **you're demonstrating your expertise and building credibility with potential buyers**. No need to tout your products and services on your blog – the rest of your website is already serving that purpose. More often than not, it's about showing people you're the experts, not telling them. Interestingly, only **36% of manufacturing websites take advantage of blogging benefits**.

And speaking of benefits, a well-executed blog also provides your business with more website traffic, more opportunities for lead conversion and stronger rankings in search engine results. **Google's algorithms take into consideration the frequency at which you post fresh content to your website**. If your blog is managed properly and you're posting on a consistent basis, that signals to Google and other search engine providers that your website is up-to-date.

Another website best practice? Your blog should also have social sharing options enabled. When people read your blog articles, they should be able to easily Tweet it out to their followers, share it to Facebook or LinkedIn, email it to a colleague, etc. Convenience is key! Think about how many more people in the right fields will see your post if you streamline the social sharing process. **Yet only 39% of the sites we analyzed that do have a blog also have social share options**.

Be Socially Savvy with Follow Links and Active Posting

Being “socially savvy” can mean a lot of different things. You don’t have to be a social media marketer to have a legitimate and effective presence online. But in the context of your website, this means that your company has active social media accounts, as well as social follow options on display—perhaps in the website footer or above the top navigation.

In our study, we found that **44% of manufacturing firms are leveraging social channels to better promote their content.** When compared to recent research from eMarketer stating that **88% of companies overall are using social media marketing tactics**, that number isn’t very strong. So why aren’t manufacturing firms keeping up with these changing times?

Well, for starters, word-of-mouth was the number one source of a manufacturing firm’s new business for decades. Trade shows also historically played an incredibly important role. Therefore, launching a full-blown inbound marketing program wasn’t a priority, nor was social media. **But today, everyone is on social media. Period.** And although not everyone is using social media at work or for research purposes, it’s still a great way to foster engagement, show off your company culture and build relationships.

Note that your social strategy isn’t going to incorporate every major channel, nor should it. What’s great about social media today is that it’s become highly targeted. On the paid side, you’re able to affordably advertise posts (perhaps showcasing a specific resource, webinar or technical paper) to a very specific demographic of people. LinkedIn Sponsored posts are great options for this type of content. Twitter, on the other hand, isn’t so helpful when trying to reach engineers, but it’s a reliable way to connect with the engineering press. **Whatever social media sites make the most sense for your business (a.k.a. the ones your clients are using) is where you should spend time.** And embedding social “follow” buttons or icons right on your website will help you attract those followers.

Have an Active LinkedIn Company Page

It's important to keep in mind that a Company Page is not the same thing as your personal account. Moreover, LinkedIn Company Pages should not be set up the same way personal accounts are set up. However, your employees can and should add to their profiles that they work for your business, which, in turn, allows them to serve as digital ambassadors and content sharers.

We're happy to report that 87 of the 100 manufacturing firm websites we investigated have a presence on LinkedIn. In terms of the depth or quality of each LinkedIn account, there was a broad spectrum; some companies had clearly put a little more time in than others. Yes, there were a few stragglers who solely had their company name on a LinkedIn page with no further information. **But it was encouraging to see that many pages included great descriptions of their businesses, recent updates, an accurate number of employees and much more!**

**Does the
business have
a LinkedIn
Company Page?**

Yes

87%

No

13%

If you're only going to "get social" on a single social media network, it probably should be LinkedIn (unless your audience uniquely uses another platform much more frequently). Think about it... if someone (like you!) is curious about a company and wants to know more, they usually turn to Google for answers.

Regularly updated LinkedIn profiles typically show up right under your website. And statistics show that business buyers are increasingly turning to LinkedIn for additional information – in the past two years, content consumption on LinkedIn has increased by 21%.

**Content
consumption
on LinkedIn has
increased by 21%**

What's more, having a Company Page allows LinkedIn users to follow your company (presenting them with another option to receive updates). Plus, if your sales and marketing team members are skilled LinkedIn users themselves, there are many tools LI offers that can help your business discover, market to and connect with target prospects. There are literally no downsides to creating a LinkedIn Company Page!

Website Content Best Practices

- Include Visual Call-to-Action Buttons
- Take Advantage of Video Content
- Conduct Case Studies and Add Customer Testimonials
- Offer an Email Subscription

Website Content Best Practices

Include Visual Call-to-Action Buttons

Graphic Call-to-Action buttons are arguably one of the most important parts of your website. The purpose of a Call-to-Action (or CTA) is to provide your visitor with a logical next step. For example, your home page might feature a CTA button that says something along the lines of “Request a Quote”—when a user clicks on the button, they are redirected to the website page where they can do so. For new site visitors who are just getting to know your company (and who might check out your blog to evaluate your expertise!), including a CTA that highlights a downloadable piece of content at the bottom of a relevant blog post is a common and effective lead conversion best practice. If the reader likes the article, why not learn more information on that topic in an eBook gated behind a lead gen form?

Does the website include Call-to-Action buttons?

Yes

No

We found that over three quarters of manufacturers have implemented quality Calls-to-Action on their websites. Although we don't have access to their visit-to-lead conversion data, it's safe to assume that those with CTAs that stand out from the background are producing more new contacts online than those without. As long as the copy used in the Call-to-Action is aligned with the connected landing page copy, you're on the right track!

Remember, CTA buttons also serve as navigational aids, guiding visitors deeper into your website and shifting their attention to the content on which you want them to focus. If your CTAs are strategically placed, customers and prospects alike will be much more likely to subscribe, buy, sign up or carry out whatever action you are asking them to perform.

Call-to-Action buttons are one of the most important parts of your website.

Take Advantage of Video Content

It's become crystal clear that video marketing will only become more and more important to a successful B2B marketing strategy, regardless of industry. **Believe it or not, companies from the high tech and manufacturing industries produce the most video content!** And this rise in video marketing makes sense; it's a great way to engage your audience, increase the time site visitors spend on your pages, improve optimization, and share customer stories, testimonials, company updates, how-to's and product information.

Moreover, video marketing tactics are widely reported to outperform many other types of content for MFG companies. In fact, a recent **B2B Manufacturing Content Marketing Report** from Content Marketing Institute reveals that 70% of manufacturers rate video marketing as an effective marketing tactic. It's also noteworthy that the use of video in this industry has quantifiably increased year-over-year – **89% of B2B manufacturers in North America are now doing some form of video marketing.**

**Does the
website feature
video content?**

Yes: 42%
No: 58%

That's quite a big difference from the 42% of manufacturers from our study who have included videos on their sites. And perhaps it's because video marketing can be a bit intimidating for SMBs who do not have a substantial marketing budget. **However, you don't need to spend a lot of time or money to produce effective video content (here are a few ideas to help you get started).** Even posting short videos showing off your company culture, production line or interactions with customers taken on team members' phones can make for great material if positioned correctly!

The whole point is to offer your prospects and customers an easy, enjoyable way to consume your content. You should be marketing to buyers the way they want to be marketed to. And all signs point to video as being the versatile, reliable and trust-building solution. Plus it's a great technique for "humanizing" your business. **People want to do business with people, not companies—so putting faces to a brand's name can have a dramatic impact on sales.** Highlighting your products and how they work through video has a similar impact. In fact, **product videos can increase purchase rates by 144%!**

Conduct Case Studies and Add Customer Testimonials

Case studies and customer testimonials are powerful marketing and sales tools. They provide social proof of your work, and they can reinforce the benefits of using your product. Particularly in industries where the product or service is difficult to understand, a well-executed customer story can serve as a tipping point for prospects who need that extra bit of insight to fully grasp how your business will make their jobs (or lives) easier.

When you or people you know search online for information about consumer products, vacation spots, restaurants and bars, vehicles, hotels (you name it), you take into account really great (or really poor) reviews, right? B2B customer testimonials work the same way. **Particularly if the testimonial is from a respected industry professional, publication or company, public affirmation that your product solves a common problem will go a long way.** Putting success stories on display is an easy way to reassure customers that your work is the best! So can you believe 78% of the MFG sites we assessed don't include them?

Does the website feature case studies or testimonials?

Customer testimonials don't need to be long or complicated. Simply publishing a quick two-sentence blurb on a product page or About page from a satisfied customer is sometimes enough to do the trick. If you have a client who found a resource on your website particularly valuable, you can also include a brief quote on the lead generation landing page to encourage conversions. Have a long-time customer who's been buying from you for years? Ask them if they'd be interested in helping out with a Q&A piece or sharing their experience through a case study. More often than not, they'll be happy you asked. **Your prospects want to know how you've helped people like them – so go ahead and tell them!**

Offer an Email Subscription

When a website visitor—be it a customer, prospect, partner or fan (and potential referral)—subscribes to your newsletter, this offers your business an easy way to nurture them and stay top of mind. Whether you're sending out coupons and other promotional material, blog updates, links to new white papers or anything else you have to pass along to engaged readers, **having an email subscription option will help you keep your audience in the loop about what's going on with your company and industry.**

Does the website offer email subscription options?

Yes: 22%
No: 78%

Email marketing may be an oldie, but it's still a goodie. In fact, HubSpot reports that 86% of professionals prefer to use email when communicating for business purposes. And Econsultancy reveals that 75% of companies agree email marketing offers "excellent" to "good" ROI. No matter what industry you're in, most people check their email daily. Yes, they're going to immediately delete anything that doesn't appear relevant to them. But with the right subject line, preview text and email design, you can easily cut right through the clutter and connect with your prospects.

75% of companies agree email marketing offers "excellent" to "good" ROI.

Optimization Best Practices

- Make Your Website Mobile-Friendly and Responsive
- Enable Analytics on Your Website
- Fully Optimize Your Site for Search

Optimization Best Practices

Make Your Website Mobile-Friendly and Responsive

Did you know that over half of searches today are being conducted via mobile devices? Because of this, Google has made recent changes to its algorithms that give even more weight to mobile-friendly websites, so if your business doesn't have a responsive site, you're likely being penalized in search results. But what exactly does "responsive" mean?

Using media queries and CSS rules, **a responsive website design adapts to a visitor's browser size and resolution, automatically rescaling page layouts to accommodate.** A responsive design can also adjust the actual content that's displayed – so page elements like contact info or directions render more prominently for non-desktop visitors. Since mobile-friendly sites adapt to any mobile screen (smartphone, tablet, etc.), prospects will actually be able to see it and use it should they find you via their mobile device.

Is the website mobile-friendly?

If your site is one of the 44% that aren't mobile ready, it's time to step into the future. Websites that aren't mobile-friendly have much higher bounce rates. If your site doesn't work well or load quickly on a smartphone internet browser, the prospect is simply going to leave the page and choose another search result, further signaling to Google and other search engines that your site lacks quality – and of course, you lose the chance to convert a lead.

Websites that aren't mobile-friendly have much higher bounce rates.

Enable Analytics on Your Website

Data analytics help you track and monitor website performance and user behavior. They can provide you with information about the number of visitors on your site, specific page views, through which channels site traffic is originating, from which devices or geographic areas traffic is coming, how campaigns are doing, and so much more. **Plain and simple: when you have analytics enabled on your site, it's a heck of a lot easier to figure out what's working and what isn't.**

Have analytics been enabled?

Most manufacturers are familiar with the perks of having access to data analytics, **seeing as 65% of sites have some form already enabled. Two very popular options are Google Analytics and HubSpot Analytics.** Both user-friendly tools exhibit sophisticated functionality, and provide comprehensive data that help users make highly informed business decisions that drive marketing and sales activities.

Of the 65% of websites with analytics enabled, 84.6% had Google Analytics, 4.6% had HubSpot Analytics, and 10.8% had both Google and HubSpot Analytics enabled. Otherwise, 35% of the websites had no form of analytics enabled whatsoever.

Types of analytics enabled?

Google: 84.6%
HubSpot: 4.6%
Both: 10.8%

Fully Optimize Your Site for Search

A website that's well optimized for search is going to be easy for search engines to crawl and "understand" on a technical level (and thus, it will likely rank higher in search results), and it will also be easier for people to find on a practical level when conducting a search. These days, a very positive website user experience is one of the most important Search Engine Optimization (SEO) factors, as Google wants to rank pages that provide better results and a better experience for people using its search bar. There are many metrics Google uses to evaluate this.

However, on-page SEO elements are still important, as they help both Google and human visitors determine the meaning and relevancy of your site pages. Although there are other attributes involved (like the page URL and image ALT text, for example), on-page optimization is generally comprised of four key elements.

- **Page Titles** – Page titles are the blue hyperlinked lines of text that show up on search engine results pages. They should be no longer than 55-70 characters, and they should not repeat keywords. (Keywords refer to the search terms and phrases someone types into the search engine, and "keyword stuffing" is a poor SEO practice that actually hurts your site's rankings). The best page titles are unique, specific and compelling, so as to attract a searcher when they scan a results page.
- **Meta descriptions** – Meta descriptions are the short blurbs that show up underneath the page titles on a results page. Your meta description should be no longer than 150-160 characters and should very accurately describe what the user is going to find when they click on the result. Although these do not contribute directly to technical SEO, a search term-to-content message match is important for the reader; therefore you should still include the keyword in the meta description if you can do so naturally.
- **H1 tags** – H1 tags (or page headers) are used to present a clearer structure of your web page and help search engines determine what the content on the page is about. Different levels of headings (there are H2s, H3s, H4s...) provide different sized titles that also indicate varying levels of importance, helping organize your site for both users and search engine bots.
- **Sitemaps** – A sitemap is much like a blueprint; it's a file where you can list all of your web pages to tell search engines about the organization of your site's content. Googlebot and other web crawlers read this file to more intelligently navigate your site. In addition, your sitemap can provide metadata associated with the pages you list in that sitemap, such as when the page was last updated, how often the page is changed, and the importance of the page relative to other URLs in the site. Particularly for sites that do not have many external links to it, sitemaps help them get discovered.

Fully Optimize Your Site for Search (Cont'd)

Here's what we found in our manufacturing website study:

Only 14% of MFG websites were optimized for search! If your team has little to no experience with SEO marketing, it just takes some training. But for those companies missing key optimization elements, it is likely that you're not receiving a high amount of organic search traffic (people who are searching using terms that might describe your product or service without using any company name). No optimization means missing out on loads of lead generation opportunities.

The More You Know...

Manufacturers are already ahead of the curve in some areas—they're LinkedIn presence leaders and mobile-friendly masters. But the truth is that many manufacturers, both in and out of this study, have a great deal of opportunity to improve the efficiency and effectiveness of their websites.

Most of the websites in this investigation, aside from the need to consider a clean and responsive design, could advance their online presence with just a few tweaks. With a couple of “quick win” tactics built into their marketing strategies, the traffic and leads from these sites could skyrocket (It really is all about the simple fix!). We've seen it before with our partners and clients – it's a strategy that's backed by numbers.

After over 15 years in business, we're proud to say that some of our longest client relationships are with business owners from industrial manufacturing industries. We hope you enjoyed reading this study as much as we liked making it. If you'd like to learn more, we'd be glad to offer an in-depth assessment of your website and inbound marketing efforts. Please feel free to **contact us** for more information or with any questions. We are here to help when you're ready!

About Us

Could your company benefit from some great marketing? Precision Marketing Group, LLC offers topnotch outsourced marketing services to B2B organizations, with a focus on inbound marketing that drives qualified leads. As a HubSpot Certified Platinum Partner, PMG has the capabilities to serve its clients with the absolute best in integrated marketing strategies and services that deliver real business results.

Of course, our team of experts enjoys providing B2B marketing strategy and execution to companies of many different sizes and types. Mixing it up keeps life interesting! However, we've found our sweet spot to be teaming up with privately held businesses with a complex sale – most often, companies in the manufacturing, technology and professional services industries.

Interested in receiving your own B2B inbound marketing assessment?
